# GEO Audit Checklist

https://www.socialchamp.com · 10 representative pages · 2026-10-13

**64%** **NEEDS WORK** 111 pass · 44 warn · 14 fail

| 1. Crawl & Indexing | 2. On-Page SEO | 3. Structured & International | 4. Performance |
|---|---|---|---|
| **100%** | **84%** | **0%** | **40%** |

| 5. LLM / AI Access | 6. LLM Content Readiness |
|---|---|
| **70%** | **68%** |

## FIX FIRST — 4 FAILING

Structured Data

Organization @id is not byte-identical site-wide (3 variants), fragmenting the entity.

Structured Data

Organization (S1) is missing tool-required field(s): url. Google documents no strictly required properties for Organization; the name/url/logo requirement is this tool's standard for entity resolution, not a Google requirement.

Raw Content Availability

The three extractors agree only 0.40: the page's content boundaries are ambiguous to any extractor, which is exactly the condition that degrades retrieval.

Entity Clarity

The entity name differs across sources — these are the strings an assistant reconciles when deciding what the site is: Organization.name "Social Champ" vs homepage h1 "Post once. Show up everywhere"; Organization.name "Social Champ" vs logo alt "SOCIALCHAMP"; WebSite.name "Social Champ" vs homepage h1 "Post once. Show up everywhere"; WebSite.name "Social Champ" vs logo alt "SOCIALCHAMP".

## THEN — 18 WARNINGS

**Content Structure**

Only 0% of chunks are viable (40–400 words with a self-contained opening sentence).

**Title Tags**

Title looks keyword-stuffed: "Social Media Management for Agencies | Simplified, Streamlined, & Scalable".

**Meta Descriptions**

Description has a keyword-list shape.

**Internal Links**

No other sampled page links to this page contextually. Sample-scoped only — the page may be well linked site-wide (E-2.4-3).

**Core Web Vitals**

PHONE: LCP p75 2640 ms needs improvement; INP p75 329 ms needs improvement.

**JS-disabled content accessibility**

80% of the rendered main content is in raw HTML; a minority requires JavaScript.

**AI Instructions Page**

The page is thin for its purpose: completeness 0.30 (7/23). Missing: Definitional sentence (what the organisation is, in one sentence), What it does / core offerings, Who it is for, Category and named alternatives/competitors, Explicit instructions to AI assistants, Key facts block, When it is not the right fit.

**Raw Content Availability**

Tab/accordion panel content is absent from raw HTML (0 vs 4735 characters after rendering).

**Raw Content Availability**

Extractor agreement is 0.65; content boundaries are unclear.

**Entity Clarity**

The h1 ("Post once. Show up everywhere") and title ("Social Media Management Tool for Agencies | Social Champ") share no significant token.

**Content Structure**

1 section(s) run past 400 words of unbroken prose (longest 647): "Frequently asked questions".

Content Structure

64% of chunks are viable; several open with an unresolved pronoun or bare demonstrative.

Answer Extractability

No sentence defines the page's primary subject ("Post once. Show up everywhere") in a form that could be quoted on its own.

Answer Extractability

8 question-form heading(s), none answered directly within three sentences: "Why Every Best Time to Post Guide Gives You Different Numbers (And Who to Trust)" → "I'm sure you must have seen at least 2 guides about the best time to post on Facebook by n"; "When Is The Best Time to Post on Facebook by Region" → "If you are a brand running campaigns across multiple continents, you need to throw out the"; "How to Find Your Own Absolute Best Times to Post on Facebook" → "I know, keeping track of different peak hours for everything before you hit the publish bu".

Answer Extractability

Modelled extractability score 0.33: A1 — Every question-style heading is followed only by a truncated teaser sentence (e.g., an anecdote about Instagram freezing) that never supplies an answer, so no heading question is addressed beneath it. A2 — Nearly all passages end mid-sentence in ellipses and depend on the linked article for meaning; only the closing promotional block would survive extraction, and even then it is only loosely self-explanatory. A3 — Claims are promotional and unverifiable ("the tools to stay ahead"), with the only would-be concrete statistic cut off mid-sentence before any number appears.

Answer Extractability

The page makes factual claims with no visible author, no date and no source links: extractable, but not trustable — those are different problems.

H1 / Headings

1 heading-level skip(s): h1 → h3 ("Built for Every Platform Your Agency Uses").

Raw Content Availability

Extracted main content is 3.17% of the HTML payload.

## WHAT THIS AUDIT DOES AND DOES NOT SHOW

> Section 6 sub-scores are modelled estimates against a fixed rubric, not measurements of retrieval behaviour by any specific AI system.

> Core Web Vitals come from a third-party API whose freshness and coverage this tool does not control.

> Pages were fetched through a third-party proxy service rather than directly, so that an identified auditor on a datacentre address is not blocked. This reports what that service received: a site that refuses ordinary crawlers may still appear reachable here, and response headers — including X-Robots-Tag — were not returned by it.

Generated from a technical audit of 10 representative pages. Not a full-site crawl: findings describe the pages listed above and patterns visible in them.
