GEO Audit Checklist

https://www.socialchamp.com · 10 representative pages · 2026-10-13

64% **NEEDS WORK** 108 pass · 41 warn · 19 fail

1. Crawl & Indexing	2. On-Page SEO	3. Structured & International	4. Performance
100%	**85%**	**0%**	**40%**

5. LLM / AI Access	6. LLM Content Readiness
100%	**51%**

FIX FIRST — 5 FAILING

- [ ] FAIL HIGH C-3.1 · Structured Data — 1 page

  Organization @id is not byte-identical site-wide (3 variants), fragmenting the entity.

- [ ] FAIL HIGH C-3.1 · Structured Data — 9 pages

  Organization (S1) is missing tool-required field(s): url. Google documents no strictly required properties for Organization; the name/url/logo requirement is this tool's standard for entity resolution, not a Google requirement.

  Fix: Add the missing field(s) url to the existing Organization node (modify the existing graph; do not add a second block — F-3.1-6).

- [ ] FAIL HIGH C-6.1 · Raw Content Availability — 4 pages

  The three extractors agree only 0.41: the page's content boundaries are ambiguous to any extractor, which is exactly the condition that degrades retrieval.

- [ ] FAIL HIGH C-6.2 · Entity Clarity — 1 page

  The entity name differs across sources — these are the strings an assistant reconciles when deciding what the site is: Organization.name "Social Champ" vs logo alt "SOCIALCHAMP"; WebSite.name "Social Champ" vs logo alt "SOCIALCHAMP"; og:site_name "Social Champ" vs logo alt "SOCIALCHAMP"; title brand suffix "Social Champ" vs logo alt "SOCIALCHAMP".

FAIL LOW C-6.5 · Content Freshness 4 pages

Unparseable date value(s): Last-Modified header="[object Object]".

THEN — 14 WARNINGS

WARN HIGH C-6.3 · Content Structure 2 pages

Only 0% of chunks are viable (40–400 words with a self-contained opening sentence).

WARN MEDIUM C-2.1 · Title Tags 1 page

Title looks keyword-stuffed: "Social Media Management for Agencies | Simplified, Streamlined, & Scalable".

WARN MEDIUM C-2.2 · Meta Descriptions 1 page

Description has a keyword-list shape.

WARN MEDIUM C-2.3 · H1 / Headings 1 page

RAW h1 "Social media management for agencies Run every client from its own workspace" differs from RENDERED h1 "Post once. Show up everywhere".

WARN MEDIUM C-2.4 · Internal Links 6 pages

No other sampled page links to this page contextually. Sample-scoped only — the page may be well linked site-wide (E-2.4-3).

WARN MEDIUM C-4.1 · Core Web Vitals 11 pages

PHONE: LCP p75 2640 ms needs improvement; INP p75 329 ms needs improvement.

WARN MEDIUM C-5.4 · AI Instructions Page 1 page

The page is thin for its purpose: completeness 0.30 (7/23). Missing: Definitional sentence (what the organisation is, in one sentence), What it does / core offerings, Who it is for, Category and named alternatives/competitors, Explicit instructions to AI assistants, Key facts block, When it is not the right fit.

WARN MEDIUM C-6.1 · Raw Content Availability 2 pages

Extractor agreement is 0.65; content boundaries are unclear.

WARN MEDIUM C-6.3 · Content Structure 3 pages

1 section(s) run past 400 words of unbroken prose (longest 643): "Questions agencies ask before switching".

WARN MEDIUM C-6.3 · Content Structure 2 pages

64% of chunks are viable; several open with an unresolved pronoun or bare demonstrative.

WARN MEDIUM C-6.4 · Answer Extractability 7 pages

3 question-form heading(s), none answered directly within three sentences: "How a post gets approved" → "01Your team reviews firstApprovals can run in several stages, so your team reviews before "; "What your clients see, without the email threads" → "A workspace for every client Each client gets its own workspace with its own channels, cal"; "What agencies and marketers say" → "I cancelled my Hootsuite contract after 12 years and switched to Social Champ.".

WARN MEDIUM C-6.4 · Answer Extractability 1 page

Modelled extractability score 0.42: A1 — Headings pose explicit how-to and comparison questions, but the text beneath each is a truncated teaser or narrative lead-in that never delivers the answer, with only one snippet gesturing at a response. A2 — Nearly every excerpt is cut off mid-sentence with an ellipsis, so a 2-3 sentence pull would be incomplete and often incomprehensible on its own. A3 — Claims are generic or truncated before any figure or verifiable detail lands, leaving only vague promotional assertions.

WARN LOW C-2.3 · H1 / Headings 1 page

1 heading-level skip(s): h1 → h3 ("Publishing").

WARN LOW C-6.1 · Raw Content Availability 2 pages

Extracted main content is 3.24% of the HTML payload.

WHAT THIS AUDIT DOES AND DOES NOT SHOW

> Section 6 sub-scores are modelled estimates against a fixed rubric, not measurements of retrieval behaviour by any specific AI system.

> Core Web Vitals come from a third-party API whose freshness and coverage this tool does not control.

> 1 check(s) were not testable and are excluded from every score; they are listed separately.

> Pages were fetched through a third-party proxy service rather than directly, so that an identified auditor on a datacentre address is not blocked. This reports what that service received: a site that refuses ordinary crawlers may still appear reachable here, and response headers — including X-Robots-Tag — were not returned by it.

Generated from a technical audit of 10 representative pages. Not a full-site crawl: findings describe the pages listed above and patterns visible in them.
